PROFESSIONAL SUMMARY

Computer Engineering senior seeking quantitative developer, software engineering, or related jobs and internships. Builds Python-based data pipelines, machine-learning models, and backtesting workflows using financial and alternative data. Strong foundation in algorithms, optimization, statistical modeling, and software development.

EDUCATION

Clemson University, B.S. in Computer Engineering *Expected Dec 2026*

Relevant Coursework: Linear Optimization, Data Structures and Algorithms, Discrete Mathematics, Network Programming

TECHNICAL SKILLS

- **Languages:** Python, C++, C, SQL, MATLAB, JavaScript
- **Libraries & Technologies:** NumPy, Pandas, scikit-learn, TensorFlow/Keras, Git, Linux, REST APIs, AWS (EC2, RDS, Lambda)
- **Analysis & Modeling:** Time-series analysis, feature engineering, classification, regression, model evaluation, backtesting, statistical modeling, optimization

PROJECTS

Trends2Alpha: Alternative-Data Equity Signal Pipeline GitHub

- Built an end-to-end Python pipeline combining Google Trends signals with Yahoo Finance price data to classify monthly stock direction for five large-cap equities.
- Engineered approximately 20 trend and market features per stock, including RSI, moving averages, rolling volatility, search momentum, spike detection, and lagged signals.
- Trained 200-tree Random Forest models using an 80/20 time-series split and implemented monthly backtesting against buy-and-hold benchmarks.
- Reported backtest AUC scores ranging from 0.867 to 0.956 and generated strategy-return, win-rate, and Sharpe-ratio summaries; documented execution-cost and look-ahead limitations.

JPMorgan Chase & Co. Quantitative Research Virtual Experience *Forage*

- Analyzed a loan portfolio to estimate customer probability of default and support credit-risk modeling.
- Applied dynamic programming to partition continuous FICO scores into categorical risk buckets for default prediction.

Neural Network Housing Price Predictor GitHub

- Developed a TensorFlow/Keras regression workflow to predict housing prices from square footage, bedrooms, bathrooms, and location.
- Implemented CSV ingestion, categorical encoding, feature scaling, model training, and inference for new observations.

WORK EXPERIENCE

Hillwood Country Club | Server *Summers 2024 and 2025*

- Worked 30-40 hours per week in fast-paced hospitality and event-service environments, coordinating with team members to deliver accurate, timely guest service.

LEADERSHIP & INTERESTS

Activities: Clemson Pickleball Club; WSBF Student Radio contributor | **Interests:** Logic puzzles, strategy games, reading, music, and web development
